Table of Contents

- Introduction
- Topography
- Watersheds
- Rainfall stations
- Mean annual rainfall
- Mean monthly rainfall series
- Mean dry season rainfall
- Mean wet season rainfall
- Mean monthly rainfall surplus series
- Water deficit
- Water supply distribution network
- Estimated mean raw water yield by catchment for March (driest month) and November (wettest month)

Introduction

The data presented in this compendium is intended to assist planners in water sector development initiatives through identification of areas over Grenada that will require investment in water augmentation measures (based on water availability) such as rainwater harvesting. The data presented is preliminary and will require validation through field observation. It must be noted that the analyses was restricted to mainland Grenada, given the lack of comparable rainfall data for Carriacou and Petit Martinique.

All primary GIS data was sourced from the Land Use Division of the Ministry of Agriculture, Lands, Forestry and Fisheries, Grenada. Analytical work was carried out by the Caribbean Environmental Health Institute. Most of the spatial analyses were conducted using IDRISI GIS software. Cartographic production was done in ArcView GIS.

The methodological guide to development of the map outputs is available on the Caribbean Environmental Health Institute's website at www.cehi.org.lc, or contact the Institute in St. Lucia at Tel: (758) 452-2501.

NOTE: The September data for the Nianganfoix station (2909) was determined to be erroneous.

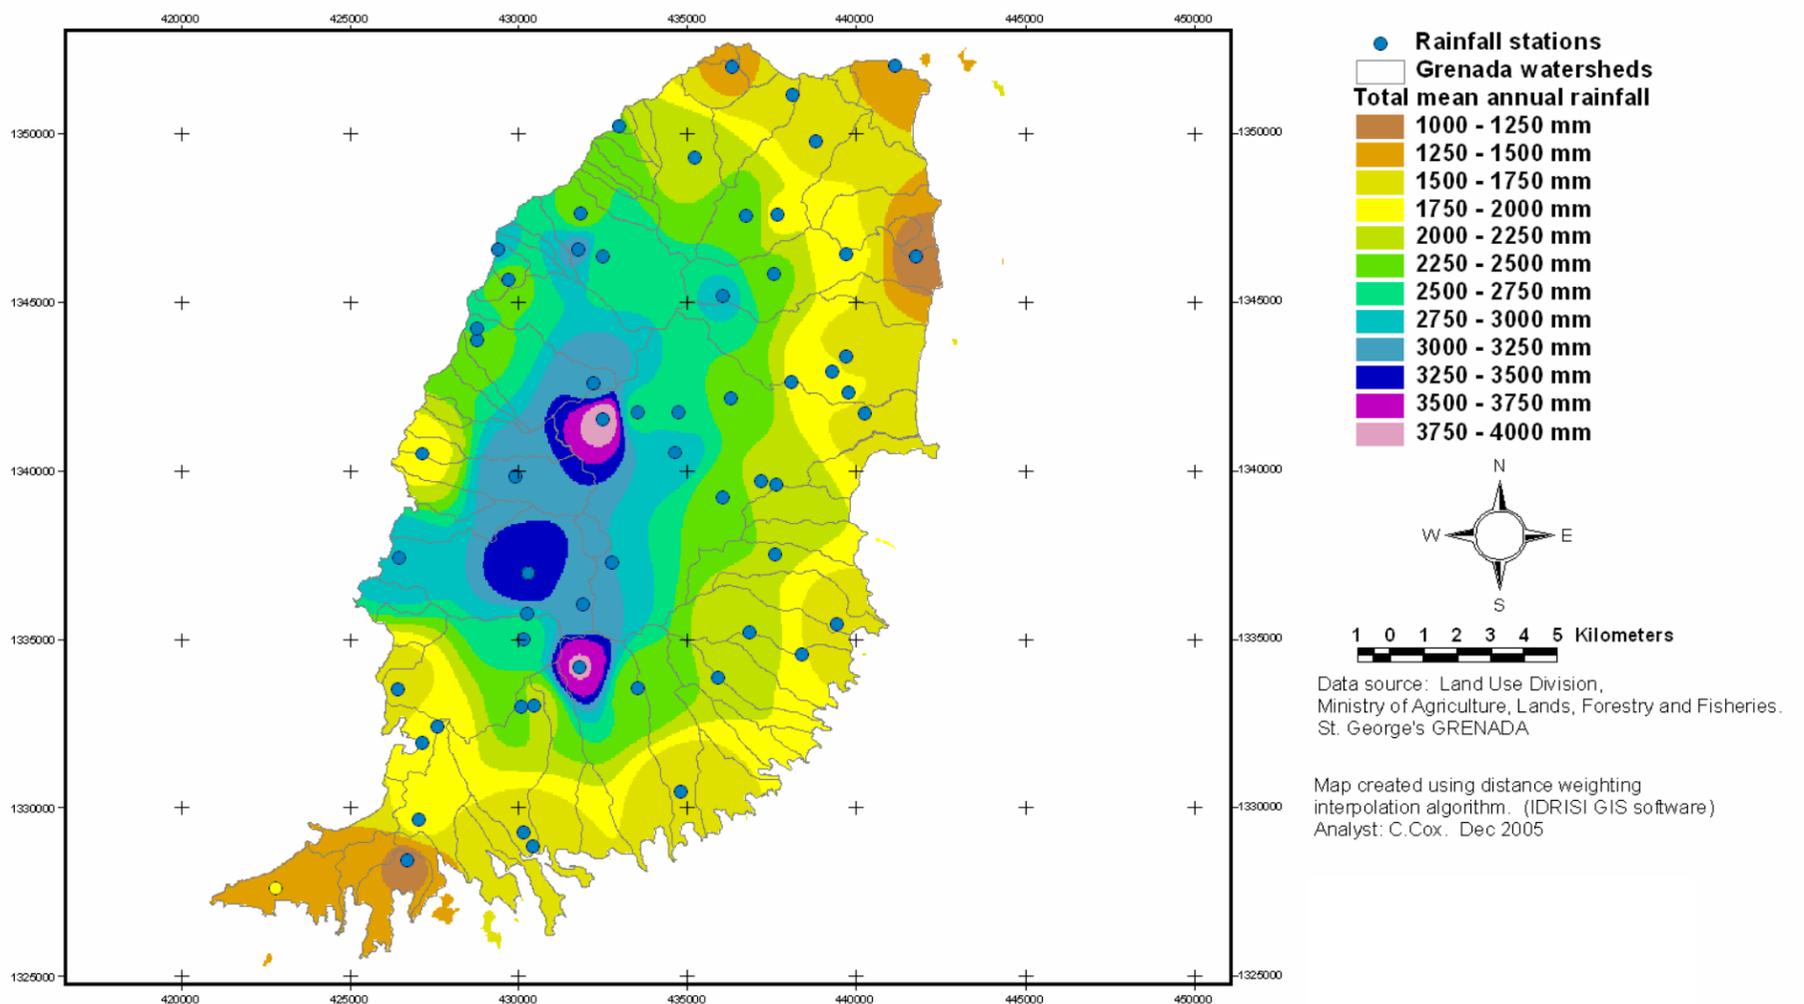

Promoting Rainwater Harvesting in Caribbean Small Island Developing States

Project funded by the United Nations Environment Programme

2006

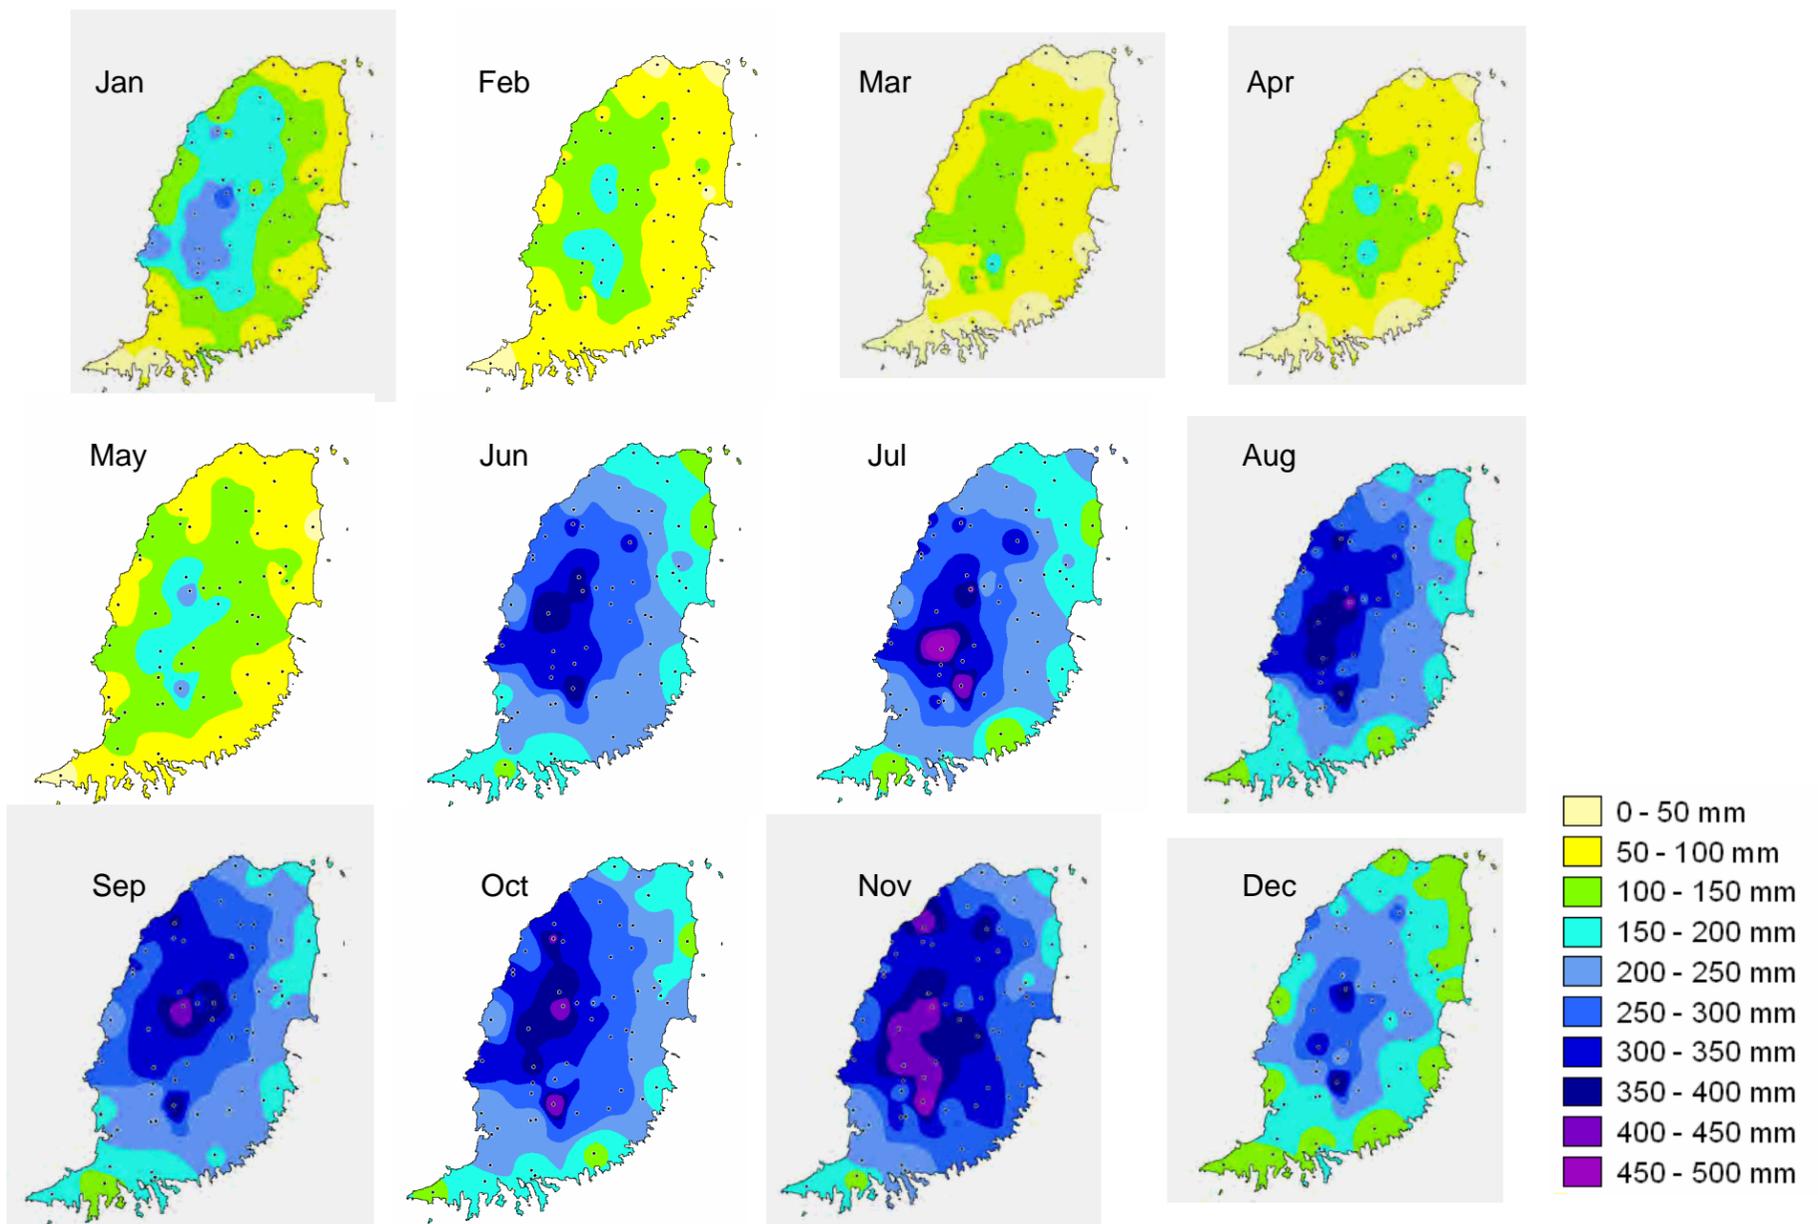

Grenada Mean Annual Rainfall

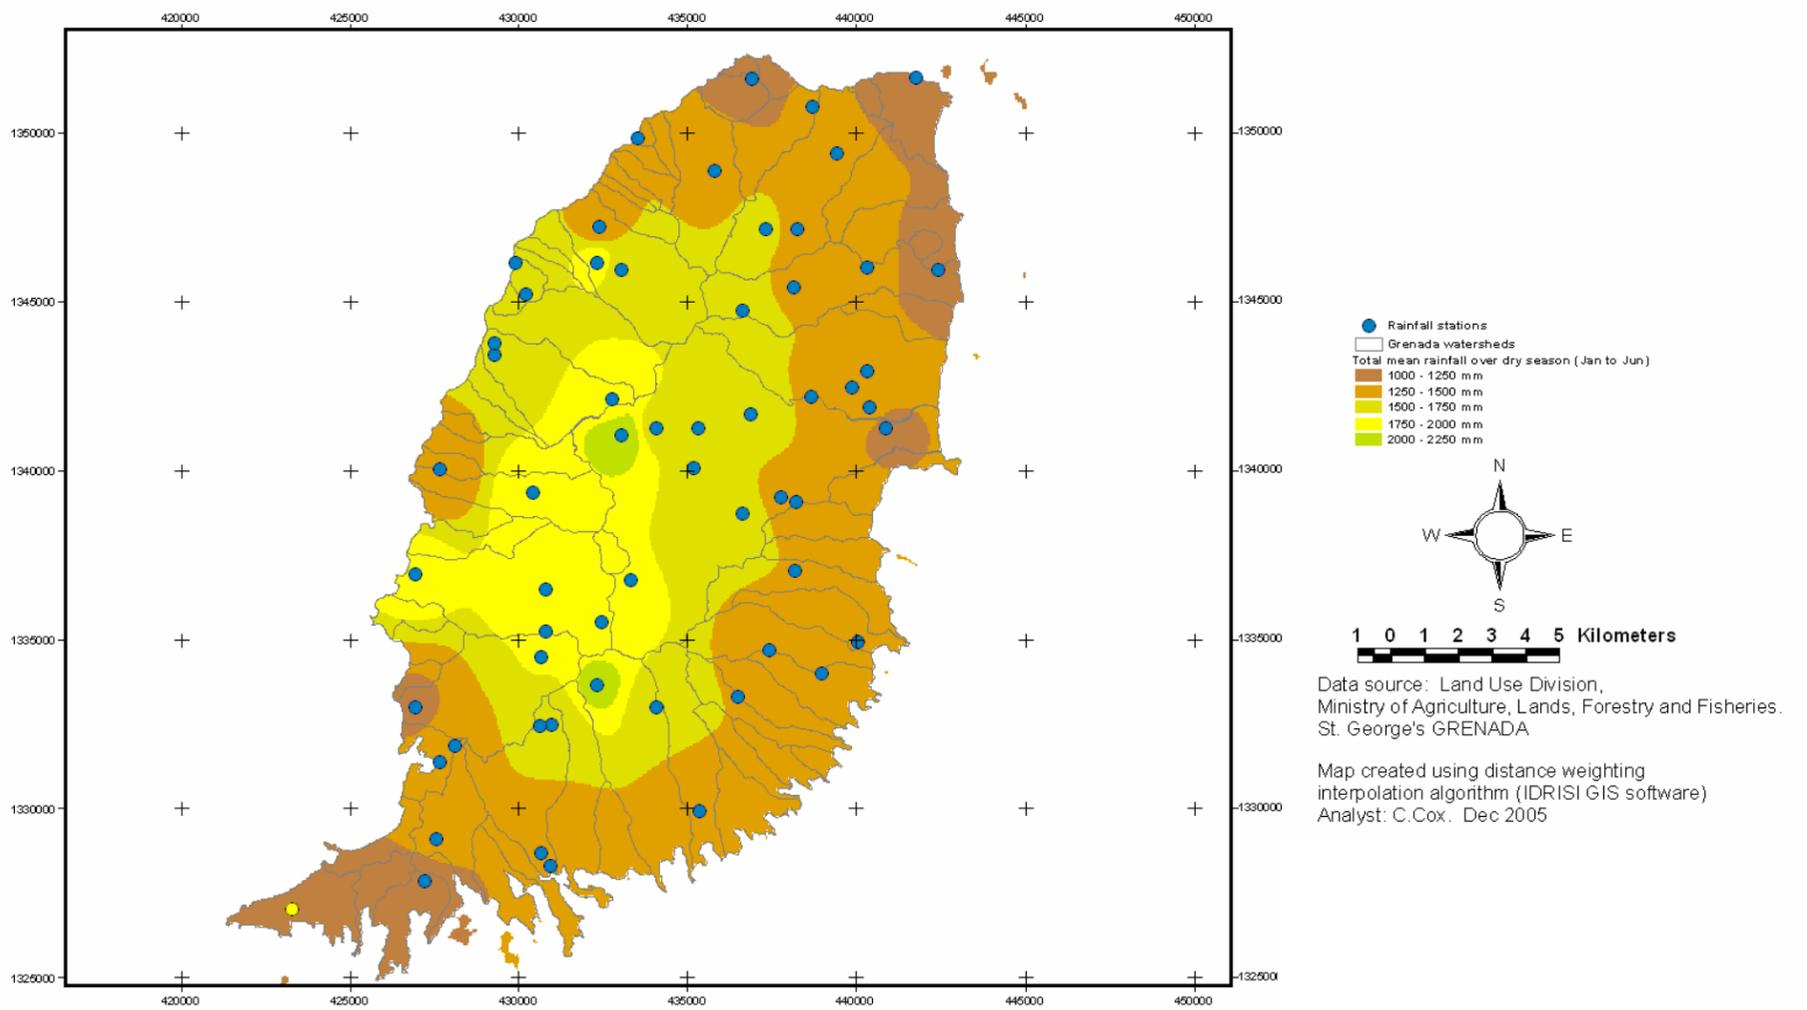

Grenada Monthly Mean Rainfall

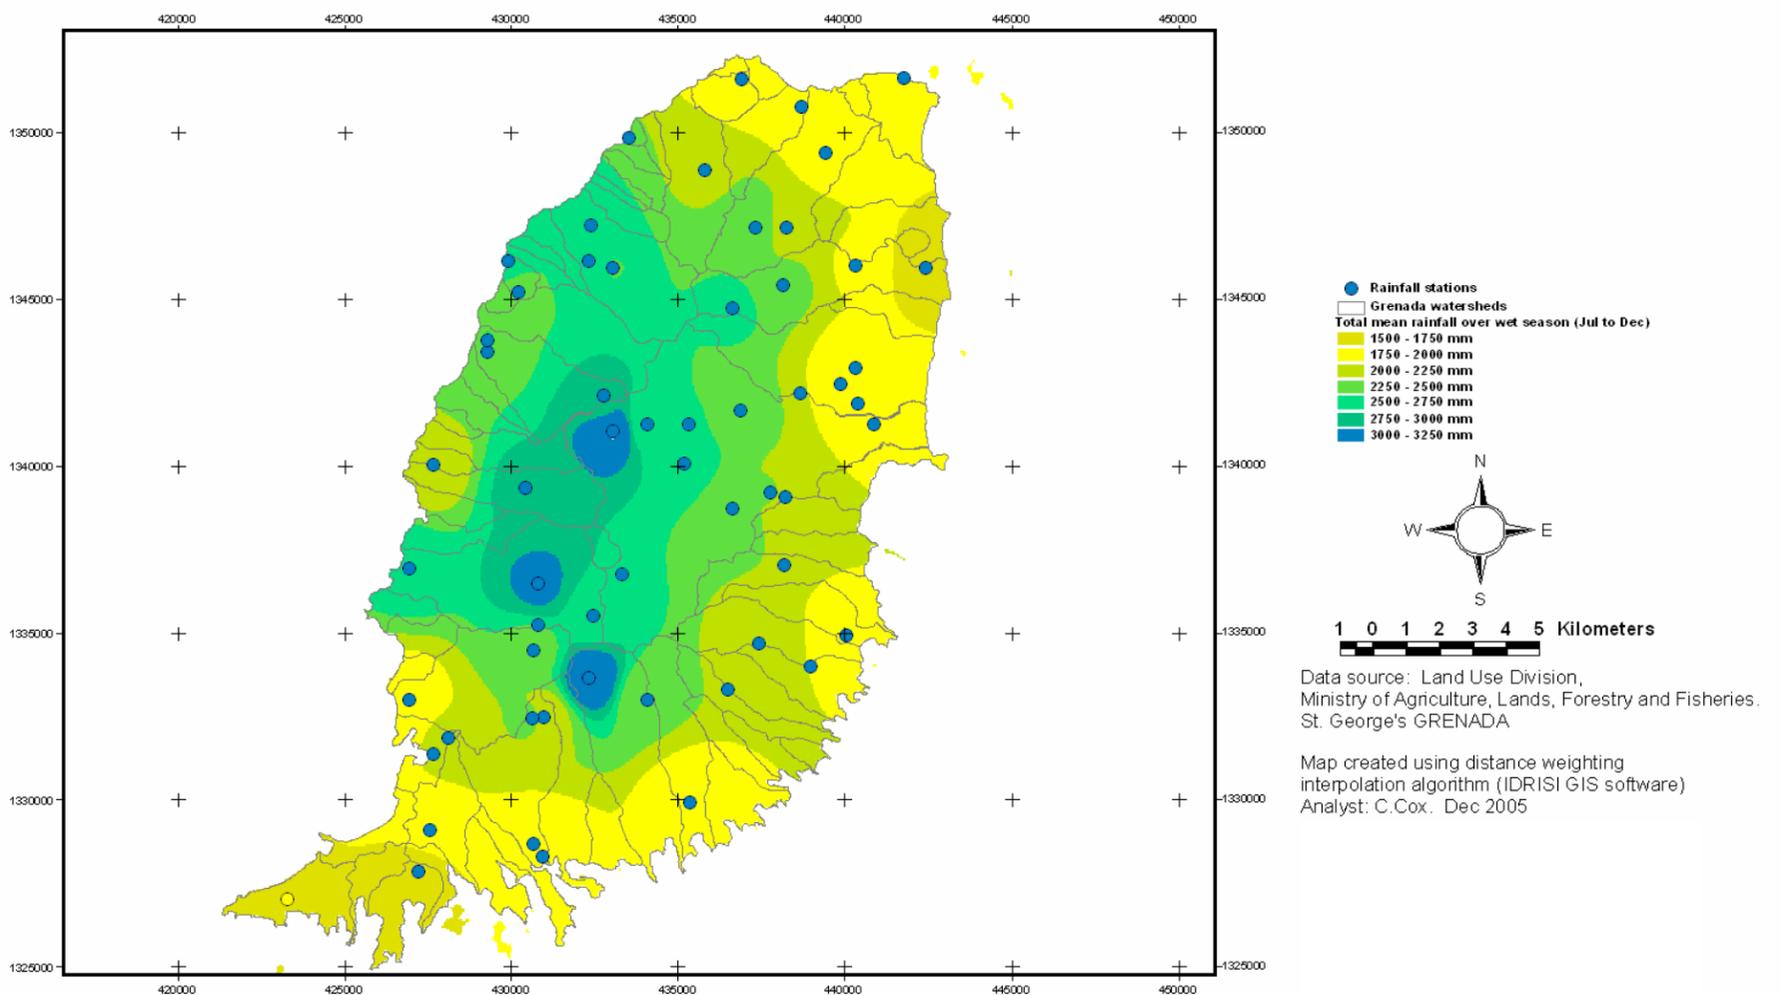

(derived from inverse distance weighting interpolation of rainfall station point observations)

Grenada Mean Dry Season Rainfall (January to June)

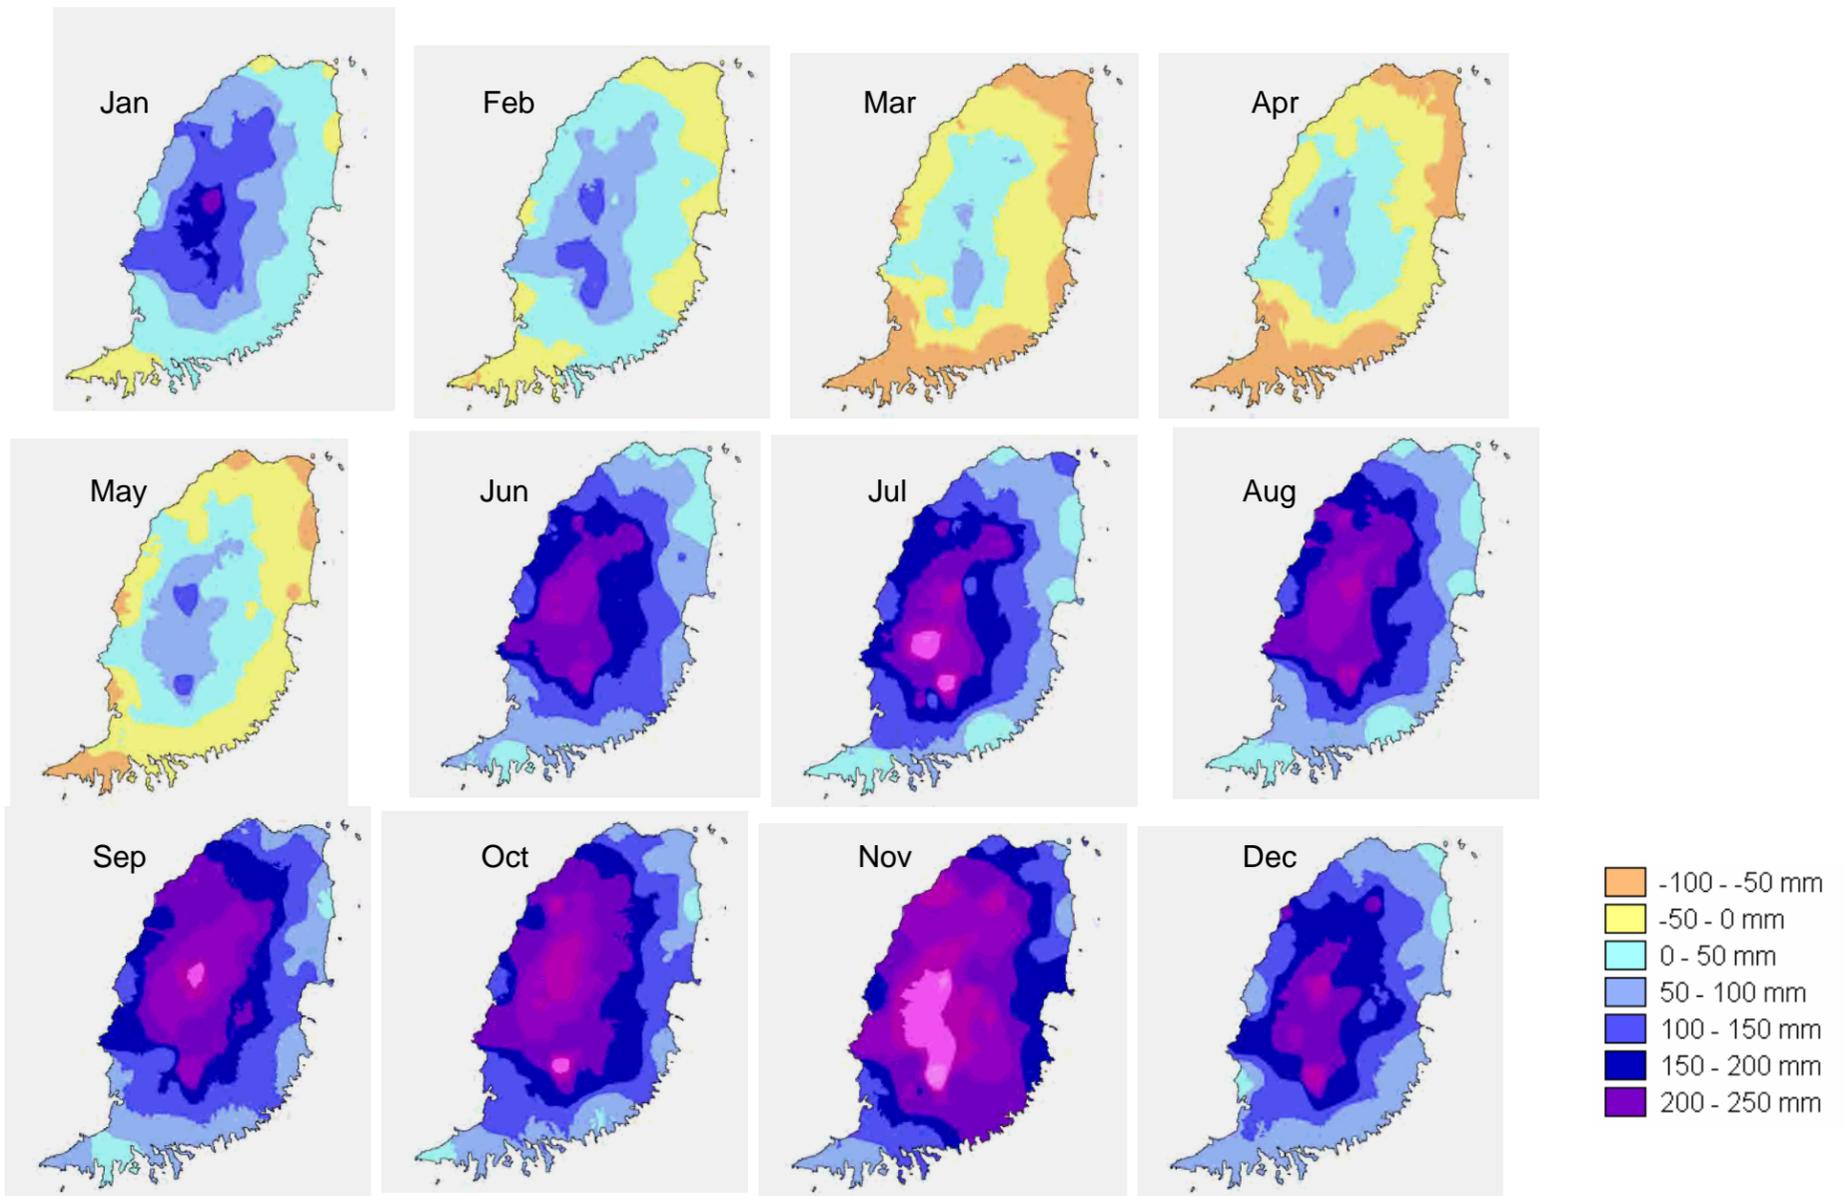

Grenada Mean Wet Season Rainfall (July to December)

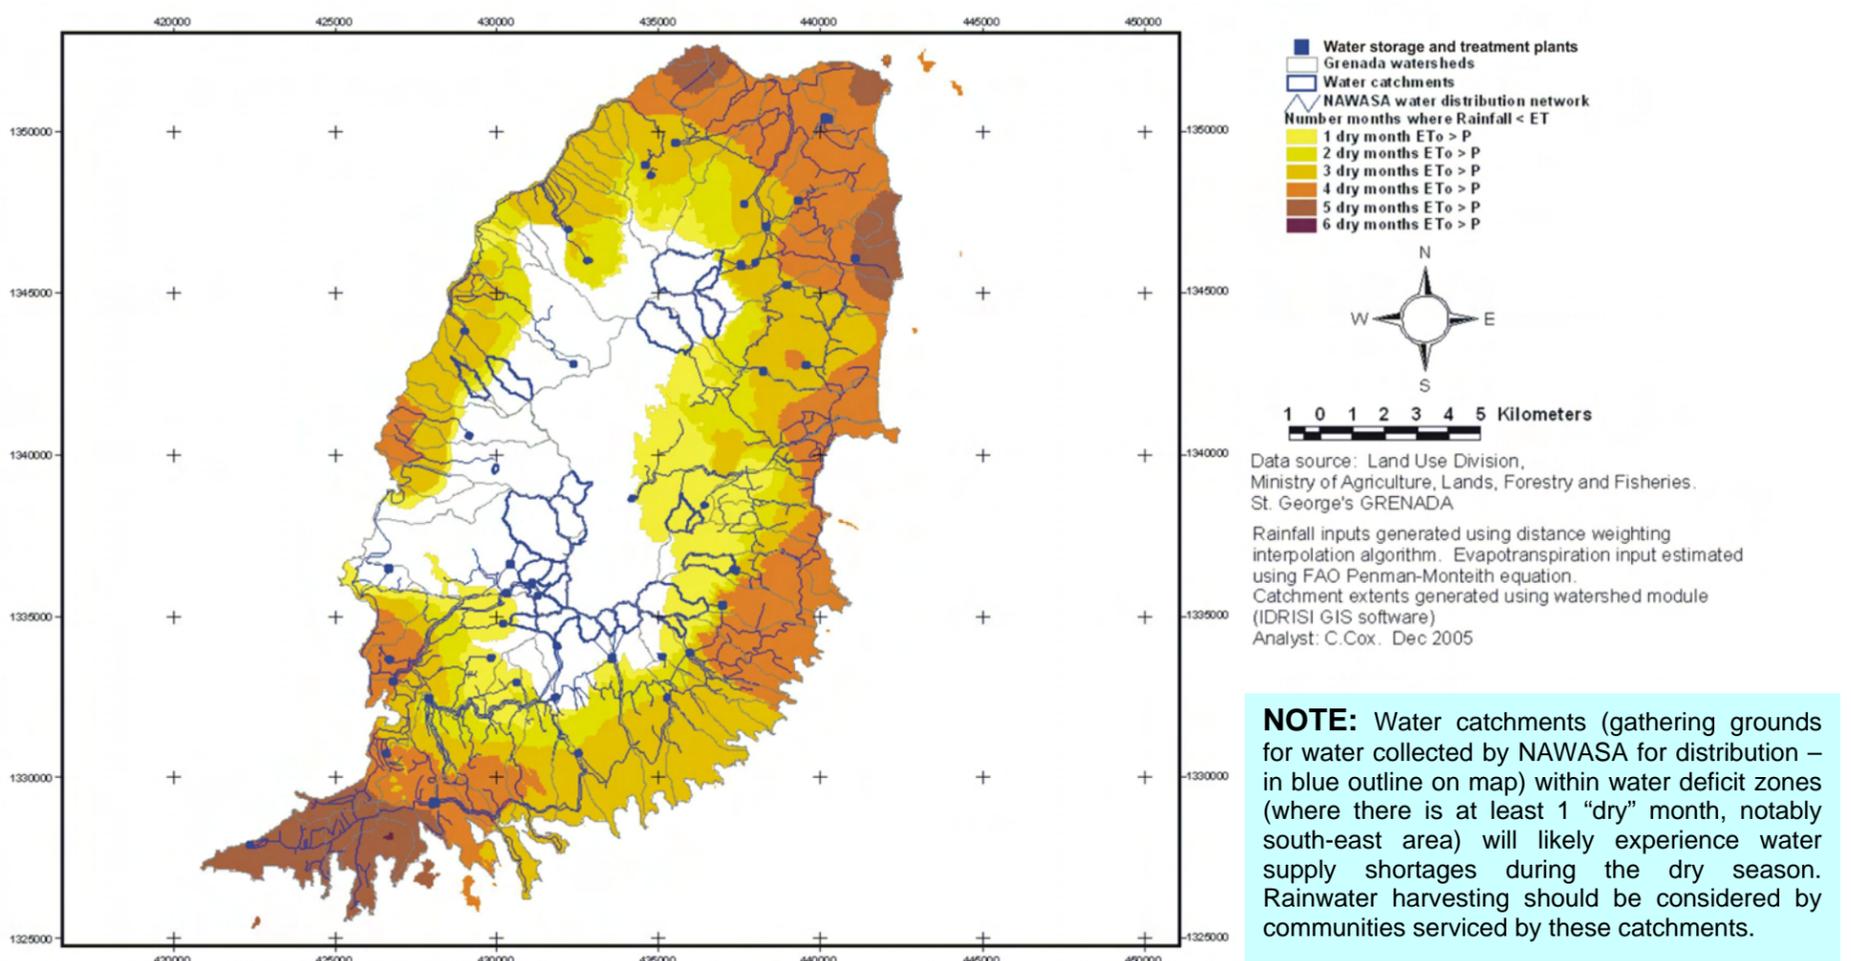

Monthly mean rainfall deficit/surplus for Grenada

(difference between rainfall and potential evapotranspiration expressed in millimeters)

Grenada Water Deficit – Number of Consecutive Dry Months

(mean monthly rainfall inputs are below estimated monthly evapotranspiration losses)

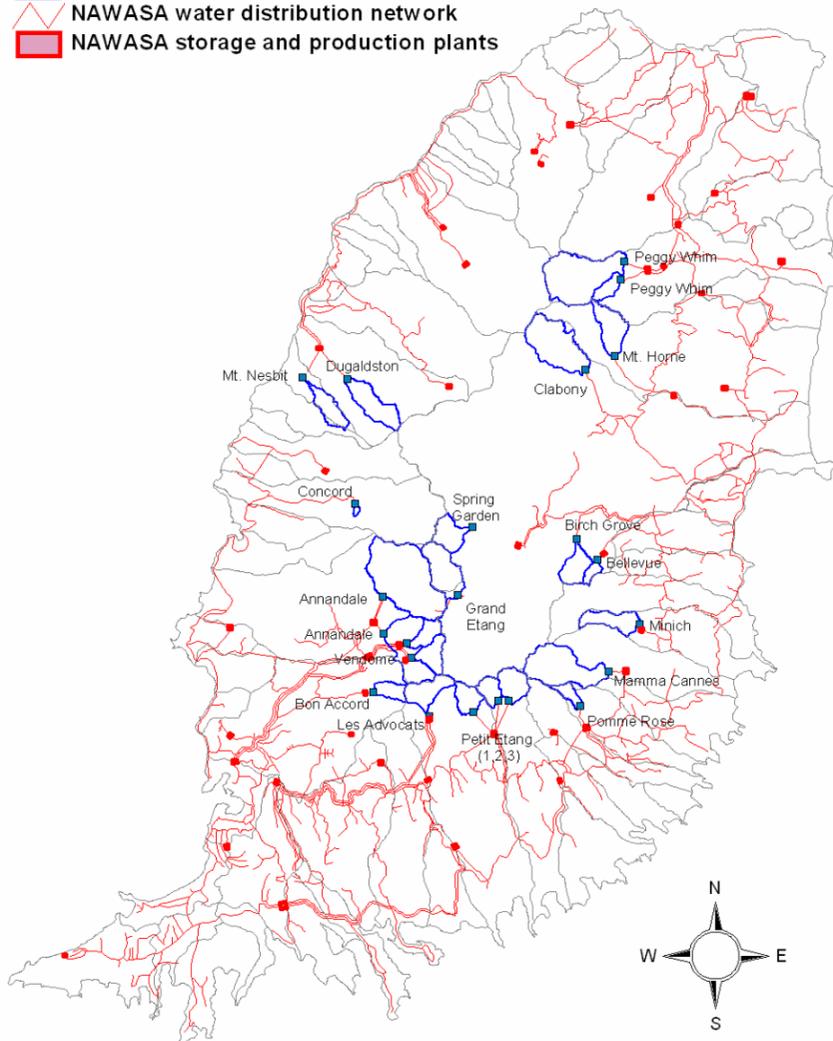

Raw water supply (runoff) estimates for National Water and Sewerage Authority (NAWASA) catchment areas in Grenada

(based on simplified water balance model for statistically driest (March) and wettest (November) months)

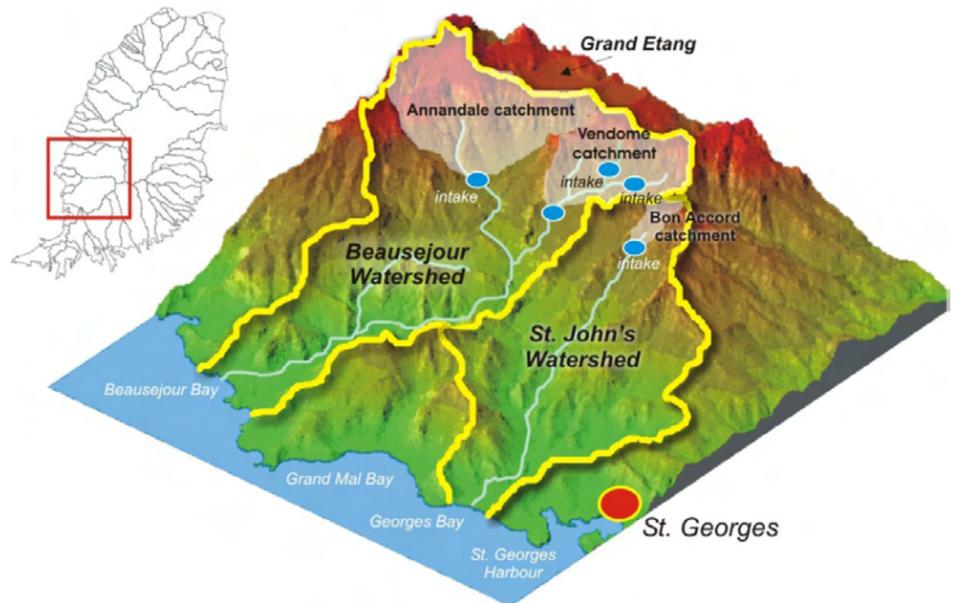

Grenada Water Supply Distribution Network

- Grenada watersheds
- NAWASA intakes
- Water catchments
- NAWASA water distribution network
- NAWASA storage and production plants

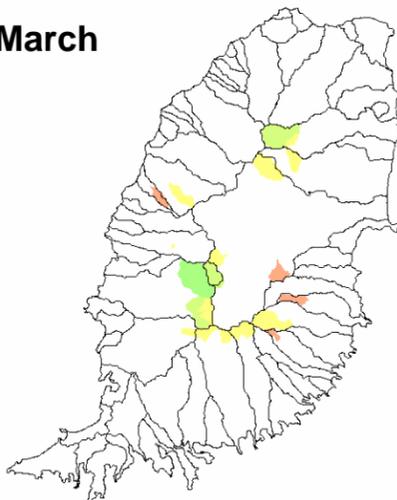

Water catchments are drainage areas upstream of intake structures (abstraction points installed on rivers) that contribute water that is collected by NAWASA for distribution. The catchment boundaries are in blue outline on map (left).

The graphic below is a three-dimensional representation of the water catchment areas within the Beausejour and St. John's watersheds on the western side of Grenada (refer to map at left).

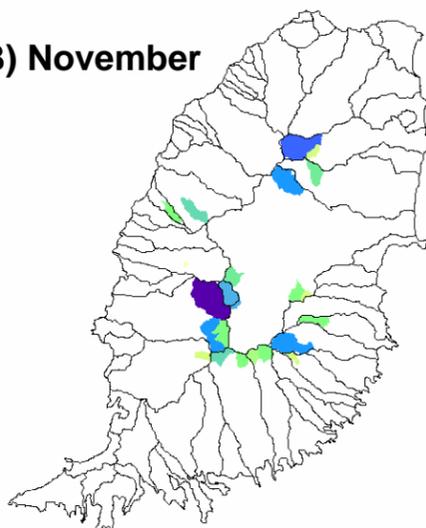

Estimated raw water yield from water catchment areas
